Abstracts

Bicycle brake adaptors are specialized mechanical components designed to enable the installation of modern disc or rim brake calipers onto bicycle frames and forks that were not originally manufactured with the necessary mounting points or standards. These adaptors serve as intermediary mounting brackets that bridge compatibility gaps between older or non-standard frames and contemporary braking systems, allowing cyclists to upgrade their bikes with advanced braking technology without requiring a full frame replacement. Typically constructed from lightweight, durable materials like aluminum or steel, they come in various designs?such as post-mount, flat-mount, or IS (International Standard) adaptors?to accommodate different rotor sizes, caliper positions, and frame geometries. By addressing issues of standardization and obsolescence in the cycling industry, brake adaptors play a critical role in extending the lifespan and enhancing the performance of existing bicycles.

The global Bicycle Brake Adaptors market size was estimated at USD 45.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.15% during the forecast period.
