## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bicycle Gear Lubricant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Bicycle gear lubricant is a lubricating product designed for bicycle transmission systems (gears, chains, flywheels, etc.). Its main function is to reduce friction and wear between metal parts, extend the life of parts, and improve riding efficiency. It is usually composed of base oil (mineral oil, synthetic oil or vegetable oil) and additives (antioxidants, preservatives, anti-wear agents, etc.), and is divided into dry, wet and ceramic types to adapt to different climates and riding environments. Dry lubricants are suitable for dry weather, have low adhesion, and dust is not easy to accumulate; wet lubricants are suitable for humid or rainy environments, have strong water resistance but are more likely to absorb dust. In recent years, with the popularity of cycling, especially the rapid development of mountain bikes, road bikes and electric-assisted bicycles, the market demand for bicycle gear lubricants has continued to rise. Consumers' requirements for product performance and environmental protection have gradually increased, prompting manufacturers to launch more high-end, environmentally friendly, and biodegradable lubricants. At the same time, the emergence of intelligent riding systems has also promoted the evolution of lubricants towards high efficiency, durability, and low maintenance. There are even high-performance lubricating products based on nanotechnology or ceramic particles, which focus on extremely low friction coefficients and long-term protection. In terms of price, the market price range is large depending on the type and brand of lubricant. Generally, the price of entry-level dry or wet lubricants is around RMB 20-50 per bottle (60-120ml); mid-to-high-end products such as ceramic lubricants and bio-based environmentally friendly lubricants can cost up to RMB 80-200, or even higher. Imported brands (such as Finish Line, Muc-Off,

Squirt, etc.) are usually more expensive than domestic brands, but they are also favored by some high-end users due to their reputation and performance stability.

The global Bicycle Gear Lubricant market size was estimated at USD 459.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the forecast period.
