## Abstracts

Bicycle oil is a special oil used to lubricate bicycle components. It is mainly used to reduce friction, reduce wear and protect metal parts to extend the life of the bicycle. It is commonly used on chains, gears, brake systems and other moving parts. A good quality chain lubricant is essential to the performance and life of the entire drivetrain. As the chain passes through the cassette, sprockets and rear derailleur pulleys, any contamination or lack of lubrication will gradually wear out the precision-machined teeth of these components, causing noise, reduced efficiency, rough shifting and ultimately high replacement costs.

The global Bicycle Maintenance Lubricant market size was estimated at USD 459.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
