Abstracts

A bicycle sharing system is a service that provides public access to bicycles on a short-term basis for users to pick up from and return to any station within a designated service area, enabled by technology such as mobile apps, GPS tracking, and automated locking mechanisms. These systems are designed to offer a flexible, affordable, and sustainable transportation option, often integrated with other modes of public transit to address first- and last-mile connectivity challenges in urban environments. The model typically operates through dock-based stations, dockless arrangements, or hybrid setups, with pricing structures that may include pay-per-ride, subscriptions, or membership plans. By reducing reliance on motorized transport, bicycle sharing systems contribute to decreased traffic congestion, lower carbon emissions, and improved public health, while also supporting urban mobility planning and smart city initiatives.

The global Bicycle Sharing System market size was estimated at USD 4100.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
