Abstracts

A bifacial double glass module is an advanced solar panel technology characterized by its dual-sided design, featuring transparent glass on both the front and back surfaces, which allows the module to capture sunlight not only directly from the front but also indirectly from the rear by reflecting light from surfaces such as the ground, snow, or nearby structures. This design enhances overall energy yield compared to traditional monofacial panels, particularly in environments with high albedo or elevated mounting configurations. The double-glass construction also improves durability, offering greater resistance to environmental stressors like humidity, temperature fluctuations, and mechanical impacts, while often extending the product's lifespan and reducing degradation rates.

The global Bifacial Double Glass Module market size was estimated at USD 6584.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 11.82% during the forecast period.
