Abstracts

Big bag emptying systems, also known as FIBC (Flexible Intermediate Bulk Container) discharging systems, are industrial material handling solutions designed to safely and efficiently unload dry bulk materials?such as powders, granules, pellets, or flakes?from large flexible bags (typically ranging from 500 to 2,000 kg capacity) into downstream processing equipment like mixers, grinders, or packaging lines while minimizing dust emissions, spillage, and manual labor. These systems typically consist of a structural frame or hoist, a bag lifting mechanism, a discharge station with features like dust containment, bag spouts or cones, flow promotion devices (such as vibrators or massagers), and sometimes integrated screening or sieving to ensure product quality and operational safety in industries such as food and beverage, pharmaceuticals, chemicals, plastics, and agriculture.
