Report Overview

Bilastine is an antihistamine medication used to treat hives (urticaria) and inflammation of the eye (allergic conjunctivitis) caused by an allergy. It is a second-generation antihistamine and takes effect by selectively inhibiting the histamine H1 receptor, preventing these allergic reactions. Bilastine has an effectiveness similar to cetirizine, fexofenadine, and desloratadine. It was originally developed in Spain by FAES Farma.

Bilastine is sold by several pharmaceutical companies under the brand names shown in the table. Bilastine is approved in the European Union for the symptomatic treatment of allergic conjunctivitis and urticaria. It is not approved for any use in the United States.

Evidence has shown that bilastine is effective in treating skin and eye symptoms of allergic reactions, improving patient's quality of life. Bilastine meets the treatment criteria for allergic rhinitis, as published by the European Academy of Allergy and Clinical Immunology (EAACI) and the Allergic Rhinitis and its Impact of Asthma (ARIA) initiative.
