## Abstracts

BIM (Building Information Modeling) Drafting Service is a specialized offering that leverages advanced digital technology to create, manage, and optimize building - related designs and documentation. It involves the use of BIM software to develop 3D models that contain comprehensive information about a building project, including its architectural, structural, mechanical, electrical, and plumbing components. These models serve as a central repository of data, enabling stakeholders such as architects, engineers, contractors, and facility managers to visualize, analyze, and collaborate on the project throughout its lifecycle. BIM Drafting Service encompasses various tasks, from initial concept design and detailed drafting of construction drawings to clash detection, quantity takeoffs, and 4D/5D scheduling, which integrates time and cost elements into the model. By providing accurate and detailed digital representations, BIM Drafting Service helps streamline project workflows, improve communication, reduce errors and rework, enhance project efficiency, and ultimately contribute to the successful delivery of high - quality building projects. BIM drafting service refers to the professional service that uses advanced digital technologies to create, manage, and optimize building - related designs and documents. The continuous advancement of global infrastructure construction and the vigorous promotion of smart city projects have increased the demand for BIM drafting services.
