Report Overview

Bimetallic lugs are electrical connectors designed to join cables of dissimilar metals, typically aluminum and copper, ensuring a secure and corrosion-resistant connection in power distribution systems. These lugs are essential in preventing galvanic corrosion, which occurs when dissimilar metals come into direct contact, leading to increased resistance, overheating, and potential system failures. They are widely used in industries such as energy, construction, and manufacturing, where reliable electrical connections are critical. The market for bimetallic lugs is driven by the growing demand for efficient power transmission, infrastructure development, and the increasing adoption of renewable energy systems, which often require connections between aluminum conductors and copper terminals.
