### Report Overview

A thermometer is a device, which is utilized for the measurement of temperature or temperature gradient of a body or a medium that finds its use in a wide number of applications, such as, scientific research, medicine, study of weather and various control and regulatory processes. Bimetallic thermometer is a type of on-site measurement instrument, which is suitable for measuring middle and high temperature, and can be used to measure directly the temperature of gasses and liquids. The bimetallic thermometer consists of a bimetallic strip. This bimetallic strip is made of two thin strips of metals that have different coefficients of expansion. These two metal strips are conjoined together by brazing, welding or riveting so that the relative motion between them is restricted. With expansion of various metals an alloys for various operations will bring in a strong demand for bimetallic thermometer and gradually it will gain strong foothold in market with rise in usage.
