Abstracts

Bimetallic transition joints are specialized components used in piping, pressure vessel, and structural applications where two dissimilar metals must be joined, typically to manage thermal expansion differences, corrosion resistance, or cost efficiency. These joints are manufactured through processes such as explosion welding, roll bonding, or hot pressure welding to create a metallurgically bonded interface that ensures mechanical integrity and prevents galvanic corrosion. They are critical in industries including oil and gas, chemical processing, power generation, and shipbuilding, where they enable the safe and reliable connection of materials like stainless steel to carbon steel, copper to aluminum, or titanium to steel, thereby optimizing system performance while mitigating material incompatibility risks.

The global Bimetallic Transition Joints market size was estimated at USD 85.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
