Report Overview

The working principle of ceramic binder jet 3D printer is mainly based on binder jet technology. During the printing process, the printer will first lay a layer of ceramic powder, and then precisely spray the liquid binder onto the powder through a special nozzle to make the powder particles bond together. This process will be repeated layer by layer until a complete 3D ceramic object is formed. Subsequently, the printed ceramic object needs to undergo post-processing processes such as sintering to improve its strength and durability.
