## Abstracts

A binocular mobile slit lamp is a portable ophthalmic diagnostic instrument that combines a binocular microscope with an adjustable slit illumination system, designed for detailed anterior segment examination of the eye in diverse clinical and field settings. Unlike traditional stationary models, this device offers mobility through compact design, battery operation, and often integrated digital imaging capabilities, enabling eye care professionals to perform high-resolution assessments of structures like the cornea, iris, lens, and anterior vitreous outside conventional clinic environments. Its functionality supports diagnosis of conditions such as cataracts, corneal injuries, and inflammation, making it valuable for outreach programs, emergency departments, remote consultations, and veterinary use, while maintaining the optical precision and stereoscopic viewing essential for accurate slit-lamp biomicroscopy.
