Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Binocular Structured Light 3D Camera competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the production of binocular structured light 3D cameras reached 116,260 units, with an average selling price of \$2,673.83 per unit. Binocular structured light 3D cameras are a type of depth perception device that combines structured light projection, dual-camera stereo vision, and 3D reconstruction algorithms. They project a known light pattern (such as stripes or grids) onto a scene. Two cameras then capture the deformation of the projected light pattern from different perspectives, and compare the two images to obtain 3D depth information.

The global Binocular Structured Light 3D Camera market size was estimated at USD 311.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
