## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bio-based Additives for Plastics competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Bio-based additives are functional chemical ingredients for polymer formulations whose feedstock (all or part) is renewable biomass (plant oils, sugars, fermentation intermediates, etc.). They provide the same kinds of functions as conventional additives ? plasticization, stabilization, lubrication, dispersing, surfactancy, flame retardancy, compatibilization, processing aid, etc. ? but use renewable carbon (or use biomass-balanced supply chains) to reduce fossil feedstock and often to improve end-of-life profiles. In 2024, global production reached approximately 345K Tons, with an average global market price of around US\$ 4,152 per ton.

The global Bio-based Additives for Plastics market size was estimated at USD 1433.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
