Abstracts

Bio-Based Barrier Coatings for Packaging Papers are eco-friendly coatings made from renewable biological resources (such as plant polysaccharides, proteins, lipids, etc.) designed to enhance the barrier properties of packaging paper. These coatings effectively block oxygen, water vapor, grease, and other external substances, thereby extending the shelf life of food and other perishable products. Compared to traditional petroleum-based coatings, bio-based coatings offer advantages such as renewability, biodegradability, and low carbon emissions, aligning with the principles of sustainable development. Bio-based barrier coatings are widely used in food packaging, pharmaceutical packaging, and industrial packaging. The core technology lies in the functional modification of bio-based materials to achieve high-performance barrier properties while maintaining the recyclability and biodegradability of the packaging paper. With increasingly stringent environmental regulations and growing consumer demand for green packaging, bio-based barrier coatings are becoming a significant trend in the packaging industry.

The global Bio-Based Barrier Coatings for Packaging Papers market size was estimated at USD 2667.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
