Abstracts

Bio based chemical fibers are a category of textile materials derived from renewable biological sources, such as wood pulp, corn, sugarcane, or algae, rather than petroleum-based feedstocks, and are manufactured through chemical processes that transform natural polymers?like cellulose, polylactic acid (PLA), or bio-based polyesters?into fibers with tailored properties for use in apparel, home textiles, industrial applications, and technical textiles; these fibers are distinguished by their sustainable origins, reduced carbon footprint, and often biodegradable or recyclable end-of-life characteristics, positioning them as environmentally preferable alternatives to conventional synthetic fibers in the broader push toward circular economy principles in the textile industry.
