Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bio-based Fiber Face Masks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Bio-based fiber face masks are made from fibers derived from renewable organisms or bio-extracts (such as plant fibers and microbial fibers) through a non-woven fabric process. They have promising development prospects and align with green, circular, and sustainable development strategies. In 2024, global bio-based fiber face masks production reached approximately 5150.5 million units, with an average global market price of around US\$181.1 per k units. Bio-based fiber face masks are driven by a dual engine of "technology + environmental protection," with leading companies building a competitive advantage through strain patents and certifications. Future competition will focus on Asia-Pacific supply chain integration and innovation in medical aesthetics applications. The male market and smart materials (such as pH-sensing membranes) may become key breakthroughs. China is a core production and consumption country, with Generation Z consumers showing a 68% willingness to purchase environmentally friendly products, and high-end products (priced between 80 and 120 yuan per mask) growing at a 75% rate.

The global Bio-based Fiber Face Masks market size was estimated at USD 933.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.40% during the forecast period.
