Abstracts

Bio based fibers and yarns refer to textile materials derived from renewable biological sources, excluding traditional petroleum-based synthetics; these include plant-based fibers such as cotton, linen, hemp, and bamboo, as well as fibers produced through biological processes like microbial fermentation (e.g., cellulose from bacteria) or agro-industrial waste streams (e.g., pineapple leaf or orange peel fibers), with an emphasis on sustainability, reduced carbon footprint, and biodegradability. The market is driven by increasing consumer awareness of environmental issues, stringent regulations on synthetic textiles, and growing demand from the fashion, automotive, and home furnishing industries for eco-friendly alternatives, though challenges such as higher production costs, scalability issues, and competition from established synthetic fibers persist; key regions of growth include North America, Europe, and Asia-Pacific, where innovation in raw material sourcing and processing technologies is accelerating.

The global Bio Based Fibers And Yarns market size was estimated at USD 7650.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
