Abstracts

Bio-based glutamic acid refers to the amino acid produced through microbial fermentation of renewable biomass sources, such as sugarcane, corn, or agricultural byproducts, rather than via chemical synthesis or extraction from animal or plant proteins. This sustainable production method reduces reliance on fossil fuels, minimizes carbon emissions, and aligns with circular economy principles, making it a preferred ingredient in the food and beverage industry as a flavor enhancer (monosodium glutamate or MSG), in pharmaceuticals for its role in neurotransmitter and metabolic functions, in animal feed as a nutritional supplement, and increasingly in biodegradable polymers and personal care products due to its biocompatibility and non-toxic properties.

The global Bio Based Glutamic Acid market size was estimated at USD 420.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
