Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bio-based Hemostatic Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The price of bio-based hemostatic materials is typically US\$20-70 per piece, with an output of approximately 65 million pieces. Bio-based hemostatic materials are functional medical materials derived primarily from natural biological resources, such as chitosan, gelatin, cellulose, and alginates. They possess excellent biocompatibility and biodegradability, and can rapidly stop bleeding by promoting platelet adhesion and aggregation, accelerating the coagulation cascade, or forming a physical barrier. Compared with chemically synthesized alternatives, they reduce potential side effects on the human body while supporting sustainable development. These materials are widely applied in wound care, surgical operations, and emergency medicine.

The global Bio-based Hemostatic Materials market size was estimated at USD 3257.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
