Abstracts

Bio-based inks are environmentally friendly printing inks made primarily from renewable resources such as plant oils, natural resins, and other biodegradable materials, instead of petroleum-based components. These inks are designed to reduce the environmental impact of printing by minimizing the use of volatile organic compounds (VOCs) and non-renewable raw materials. Common bio-based ingredients include soybean oil, linseed oil, and other vegetable oils, which serve as binders and carriers for pigments. Bio-based inks are widely used in packaging, publishing, and eco-conscious printing applications, aligning with sustainable practices and regulatory requirements for greener solutions.

The global Bio-based Inks market size was estimated at USD 822.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.10% during the forecast period.
