### Report Overview

Matting effects in coating applications have traditionally been created by means of synthetic or mineral powder particles. In many instances, such powders were made of ground polymer, i.e. finely milled plastics such as polypropylene or polyurethane. Those particles are not biodegradable and are classified as so-called “microplastics”. In recent times, many legislations (particularly in Europe and North America) have recognized the environmental damage caused by such plastic beads, which has incited innovative manufacturers to search for natural and even biodegradable alternatives.
