Abstracts

Bio based pentylenediamine is a diamino compound derived from renewable biomass sources such as plant sugars or agricultural waste, serving as a sustainable alternative to petroleum-based pentylenediamine. It is primarily used as a monomer in the production of bio-based polyamides (nylon-5X), offering comparable mechanical and thermal properties while reducing carbon footprint and dependency on fossil fuels. This chemical is also employed in epoxy curing agents, corrosion inhibitors, and specialty polymers, aligning with the growing demand for green chemistry solutions across industries such as automotive, textiles, electronics, and coatings. Its production typically involves fermentation processes using engineered microorganisms to convert feedstocks like glucose into the target molecule, followed by purification, making it a key component in the transition toward circular and low-carbon economies.

The global Bio Based Pentylenediamine market size was estimated at USD 320.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
