### Report Overview

Bio-based Polyethylene is (also known as renewable polyethylene) is polyethylene made out of ethanol, a renewable raw material, which becomes ethylene after a dehydration process. Bio-based Polyethylene is produced from ethanol sugarcane, while the traditional polyethylene uses fossil sourced raw materials such as oil or natural gas. Bio-based Polyethylene captures and fixes CO<sub>2</sub> from the atmosphere during its production, helping to reduce greenhouse gases emission.

Bio-based Polyethylene can be made from various feedstock including sugar cane, sugar beet, and wheat grain. It is first made using sugar cane from Brazil.

Bio-based PE market growth in Europe can be attributed to the stringent European Commission regulations intended for restricting GHG emission. Montreal Protocol adoption in U.S. and Canada is expected to fuel bio-based PE demand as an eco-friendly packaging product in North America.
