Report Overview

Bio-based polymers are defined as materials for which at least a portion of the polymer consists of material produced from renewable raw materials.

Major part of the bio-based polymers produced are consumed by the packaging industry. Within packaging, rigid packaging (bottles and others) is a major consumer followed by flexible packaging (films and others). Bio-based polymers are considered for packaging since packaging is only needed for short time use and in big quantities. However, apart from packaging industry, considerable part of bio-based polymers is also used in durable applications, including construction or high performance automotive applications.
