Abstracts

Bio based polyurethane is a type of polyurethane polymer derived in part or whole from renewable biological resources, such as vegetable oils, starches, or agricultural residues, as opposed to conventional polyurethane which relies exclusively on petrochemical feedstocks. It retains the versatile properties of traditional polyurethane?including durability, flexibility, and thermal insulation?while offering a reduced carbon footprint, biodegradability in certain formulations, and alignment with circular economy principles. The degree of bio-based content can vary, and the material is used across industries such as construction (for insulation and coatings), automotive (for seats and panels), furniture (for foams and finishes), and packaging, positioning it as an eco-friendly alternative within the broader polyurethane market.

The global Bio Based Polyurethane market size was estimated at USD 1050.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
