Report Overview

Bio based polyurethane refers to product use renewable biological materials, including crops, trees, other plants and their residues as raw materials, polyurethane products produced through biochemical, physical and other methods.

Bio-based polymers generally have a lower CO₂ footprint and are associated with the concept of sustainability. Because of concerns about the depletion of fossil resources and the global warming associated with the use of petrochemicals, new bio-based polymers continue to be developed.

Asia Pacific was the largest producer of bio-based polyurethane and accounted for just less than one-third of total production in 2017. Abundant availability of synthetic diisocyanates and increasing production capacities of regional bio-PU manufacturers are the major factors that contributed to bio-based polyurethane market growth. The regional market is anticipated to witness the highest growth over the forecast period on account of increasing infrastructure spending especially in emerging economies such as China, India, and Japan. The growth of automotive and packaging industries may also spur growth in demand for these bio-polymers in this region.
