Abstracts

Bio-based polyurethane resin is a type of polymer derived partially or entirely from renewable biological sources such as vegetable oils (e.g., castor, soybean, or palm oil), sugars, or other bio-based polyols, which serve as alternatives to conventional petroleum-based polyols in the production of polyurethane materials. These resins retain the versatile properties of traditional polyurethanes?such as durability, flexibility, adhesion, and resistance to abrasion and chemicals?while offering improved sustainability profiles through reduced carbon footprints, biodegradability in certain formulations, and decreased dependency on fossil resources. They are used across various applications including coatings, adhesives, sealants, elastomers, foams, and composites, catering to industries such as construction, automotive, furniture, packaging, and textiles, where environmental performance and regulatory compliance are increasingly prioritized.

The global Bio Based Polyurethane Resin market size was estimated at USD 720.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
