Abstracts

Bio-based recycled chemical fiber is a kind of synthetic fiber made from natural plant fiber or animal fiber through chemical treatment and regeneration process. This fiber combines the advantages of natural fibers and the controllability of chemical fibers, has good biodegradability and environmental protection, and has gradually become one of the research and development priorities of the textile industry. Bio-based recycled chemical fibers use natural plant or animal fibers as raw materials, reduce dependence on fossil fuels and limited resources in the production process, and have lower environmental impact. With increasing concerns about environmental protection and sustainability, the market demand for this fiber is likely to increase.

The global Bio-Based Recycled Chemical Fiber market size was estimated at USD 4433.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
