Report Overview

Bio-based superabsorbent polymers (bio SAPs) are advanced materials designed to absorb and retain large amounts of water or aqueous solutions. These polymers are an eco-friendly alternative to traditional superabsorbent polymers, which are typically derived from petroleum-based sources. Bio-based SAPs are made from renewable resources, such as starch, cellulose, or other natural polymers. This reduces the reliance on fossil fuels and decreases the carbon footprint associated with their production. Bio-based SAPs often have a lower environmental impact during production compared to their petroleum-based counterparts. They contribute to sustainable and environmentally friendly product development.

The global Bio Based Superabsorbent Polymer market size was estimated at USD 385.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
