Abstracts

Bio-based terephthalic acid (bio-TPA) is a sustainable chemical intermediate derived from renewable biomass sources?such as sugars, lignocellulosic materials, or waste streams?rather than fossil-based feedstocks like para-xylene. It serves as a key monomer in the production of polyethylene terephthalate (PET) and other polyesters, offering identical molecular properties to its petroleum-based counterpart while significantly reducing carbon footprint and dependence on non-renewable resources. The development of bio-TPA aligns with circular economy principles, supporting the manufacturing of recyclable and biodegradable plastics, textiles, and packaging materials with lower greenhouse gas emissions across the product lifecycle. As such, it represents a critical innovation in the transition toward bio-based and environmentally responsible chemical production.

The global Bio Based Terephthalic Acid market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Bio Based Terephthalic Acid market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
