## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bio-based Unsaturated Polyester Resins competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global bio-based unsaturated polyester resins production reached approximately 32,500 tons, with an average global market price of around US\$2,000 per ton. In 2024, the global's total production capacity of bio-based unsaturated polyester resins reached 46,428 tons. The industry average gross profit margin of this product reached 32%. Bio-based Unsaturated Polyester Resins (Bio-UPRs) are a class of thermoset polymers derived partially or wholly from renewable biological sources. These resins are designed to reduce reliance on fossil fuels and lower VOC emissions, while maintaining performance characteristics suitable for applications in composites, coatings, and plastics. The upstream segment relies on agricultural feedstocks like soy, which are processed into bio-based monomers. The midstream segment involves chemical companies, which synthesize these monomers into polyester prepolymers and formulate the final resins. The downstream segment provides products to industries like construction and automotive, where major brands are increasingly adopting sustainable materials. Bio-based unsaturated polyester resins, as an environmentally friendly synthetic material, have attracted much attention for their development prospects. They replace some traditional petroleum-based raw materials with renewable biomass resources (such as vegetable oils and starch), aiming to reduce dependence on fossil fuels and lower carbon footprints. Currently, the industry is actively promoting green transformation, and the research and development of bio-based unsaturated polyester resins has become one of the important directions. Driven by the goal of "carbon neutrality," the market demand for sustainable and environmentally friendly materials is increasing, and relevant policies continue to

encourage the application of green and environmentally friendly materials. In the future, with continuous technological progress and the expansion of application areas, bio-based unsaturated polyester resins are expected to increase their penetration rate in composite materials, coatings, and other fields, becoming an important force driving the sustainable development of the industry.

The global Bio-based Unsaturated Polyester Resins market size was estimated at USD 65.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
