Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bio-Chip Media competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Bio-Chip Media production reached approximately 1738 K cubic meter, with an average global market price of around US\$ 927 per cubic meter. Bio-Chip Media mainly related to the culture media for bio - chips and the carriers in bio-chip technology. Culture Media for Bio-chip is the culture medium used to support the growth and function of biological samples on bio-chips. For example, Bio-CHO-1 SFM base is a serum-free medium designed for the monolayer culture of Chinese hamster ovary (CHO) cells, which can optimize cell growth and protein expression. This kind of medium is an important part of the experimental system when using bio - chips for related biological experiments, and it is used in conjunction with bio-chips to ensure the normal progress of biological reactions on the chips. In a broad sense, bio-chips are engineered substrates that can carry out a large number of biochemical reactions simultaneously. Some carriers in bio-chip technology can also be regarded as a form of "Bio-Chip Media". For example, in the moving bed biofilm reactor (MBBR) technology, the floating high - capacity microorganism bio-chip media is used in aeration and anoxic tanks. These carriers provide a large-surface area for the contact of water, air, and bacteria, and the microorganisms on them can decompose organic matter. Although this is different from the traditional concept of biological culture media, it plays a key role in the reaction process of bio-chips, so it can also be understood as a special "media" in bio-chip technology.

The global Bio-Chip Media market size was estimated at USD 1611.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.70% during

the forecast period.
