Abstracts

Bio Circular Balanced EVA (Ethylene-Vinyl Acetate) refers to a specialized category of ethylene-vinyl acetate copolymer foam that is produced using bio-based or recycled raw materials, incorporates circular economy principles such as recyclability or biodegradability, and is manufactured through processes designed to minimize environmental impact, such as reduced energy consumption or closed-loop production systems. This material maintains the key physical properties of traditional EVA?such as flexibility, cushioning, shock absorption, and durability?while aligning with sustainability goals by reducing reliance on fossil fuels, decreasing waste, and supporting end-of-life recovery options, making it suitable for applications in footwear, sports equipment, packaging, and consumer goods where eco-friendly material alternatives are increasingly demanded.

The global Bio Circular Balanced Eva market size was estimated at USD 45.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
