Report Overview

Biohazard waste, also called biomedical waste or infectious waste, is any waste having contagious materials or possibly contagious substances like microbiological, pathological, human bodily fluids and animal waste. Highly contagious sharp waste such as needles, glass pipettes, blades and others waste should be disposed. Biohazard bags are specially designed to accumulate or dispose of such substance from a crime or accident and take to a lab for analysis. These bags are quite helpful for industrial use to collect industrial biohazard materials. Biohazard bags prevent contamination of the samples. These biohazard bags are usually made of various materials such as polyethylene, polymers, HDPE and other materials. These biohazard bags are highly preferred in hospitals, laboratories, pharmaceutical industries and chemical industries to store the biohazard waste material in the biohazard bags for its further disposal.
