Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bio Lactase Enzyme competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global bio lactase enzyme production reached approximately 26,550 ton, with an average global market price of around USD 50,000 per ton. A factory gross profit of USD 12,500 per ton with 25% gross margin. A single line full machine capacity production is around 1,100 ton per line per year. downstream demand is concentrated in dairy processing followed by infant formula, dietary supplements and food ingredients. A dairy adds adjustable dose of neutral lactase powder into a continuous dosing line to manufacture lactose-reduced milk. Bio-lactase enzyme is a natural protein that acts as a catalyst to break down the milk sugar lactose into simpler sugars, glucose and galactose, which the body can more easily absorb. It is used to help individuals with lactose intolerance digest milk and dairy products, and it is also utilized by food manufacturers to improve dairy products.

The global Bio Lactase Enzyme market size was estimated at USD 1328.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
