Report Overview

An organic acid is an organic compound with acidic properties. The most common organic acids are the carboxylic acids, whose acidity is associated with their carboxyl group -COOH . Sulfonic acids, containing the group $\text{-SO}_2\text{OH}$, are relatively stronger acids. Alcohols, with -OH , can act as acids but they are usually very weak. The relative stability of the conjugate base of the acid determines its acidity. Other groups can [also] confer acidity, usually weakly: the thiol group -SH , the enol group, and the phenol group. In biological systems, organic compounds containing these groups are generally referred to as organic acids.
