Report Overview

Bio-based nylons are similar in properties to conventional nylon, except they are produced using specialty bio-based monomers, rather than the conventional petroleum-derived monomers. They are gaining interest in the industry because they offer potential cost savings, and production of the monomers allows reduced greenhouse gas emissions. Bio-based nylon resins are expected to be drop-in replacements for conventional nylons used in manufacturing an array of consumer goods, in medical applications, etc. The success of bio-based nylons versus conventionally produced nylons depends on the price competitiveness, economics of the raw materials, and production processes.

The global Bio Polyamide Resin market size was estimated at USD 1501.9 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
