Abstracts

Bio rational fungicides represent a distinct category of plant protection products derived from natural sources, such as microorganisms, plant extracts, biochemicals, or minerals, which function through non-toxic modes of action to suppress fungal pathogens while minimizing adverse effects on human health, non-target organisms, and the environment. These products are characterized by their targeted mechanisms?often inducing systemic resistance in plants, disrupting pathogen communication, or competitively excluding harmful fungi?rather than relying on broad-spectrum chemical toxicity. As a subset of biopesticides, bio rational fungicides are designed to align with integrated pest management (IPM) strategies and sustainable agricultural practices, offering an effective alternative or complement to conventional synthetic fungicides, particularly in contexts where residue limits, resistance management, and ecological impact are pressing concerns.

The global Bio Rational Fungicides market size was estimated at USD 4580.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
