Abstracts

Bio-based succinic acid is succinic acid ($C_4H_6O_4$) that is derived from renewable biological sources, such as plants, algae, or microorganisms, rather than from fossil fuel-based (petrochemical) sources. It is produced using biotechnological processes, primarily fermentation, where renewable feedstocks like sugarcane, corn, or biomass are converted into succinic acid through the action of specific microorganisms (such as bacteria or fungi). This process offers a more sustainable and environmentally friendly alternative to traditional methods, which rely on petroleum-based feedstocks. Bio-based succinic acid has the same chemical structure and properties as its petrochemical counterpart but is considered more eco-friendly because it is derived from renewable resources, thereby contributing to a reduction in carbon emissions and supporting the transition to a circular economy. Succinic acid derived from renewable sources (bio-based succinic acid) is increasingly popular due to the growing shift towards sustainable and green chemicals. It is considered a building block for a variety of eco-friendly products, such as biodegradable plastics. Sustainability and Green Chemistry: As industries and consumers increasingly prioritize environmental concerns, the demand for bio-based, renewable chemicals, including succinic acid, is on the rise. Bio-based succinic acid reduces reliance on fossil fuels and helps lower greenhouse gas emissions, which is a key selling point in the transition toward sustainability. Rise of Bioplastics: Bio-based succinic acid is a key feedstock in the production of biodegradable plastics (such as polybutylene succinate, or PBS), which are gaining popularity as alternatives to traditional, petroleum-based plastics. The growing environmental concerns over plastic waste are a major driver behind this demand. Government Regulations and Incentives: Governments worldwide are implementing policies and regulations to support the use of renewable chemicals and bio-based materials. Subsidies, grants, and tax incentives for companies developing bio-based alternatives encourage the growth of the bio-based succinic acid

market. **Consumer Demand for Eco-friendly Products:** There is an increasing consumer preference for products made from sustainable, bio-based materials, including plastics, pharmaceuticals, and cosmetics, which drives the demand for bio-based succinic acid. The core manufacturers of bio-based succinic acid in the world include LCY Biosciences (BioAmber), Reverdia, Kawasaki Kasei Chemicals, Nippon Shokubai, Shandong Feiyang, etc. The top five manufacturers account for about 70% of the global market share.

The global Bio Succinic Acid market size was estimated at USD 66.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.40% during the forecast period.
