The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bioabsorbable Interference Screw competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Bioabsorbable Interference Screw is an implant used in orthopedic or sports medicine surgery. It is mainly used to fix the graft between soft tissue (such as tendon or ligament) and bone. It is made of biodegradable materials (such as magnesium alloy, polylactic acid (PLA), polyglycolic acid (PGA), polyetheretherketone (PEEK), etc.). It has biocompatibility, mechanical properties, and promotes bone regeneration. It can be gradually degraded and absorbed by the body in the body without secondary surgery, thereby reducing patient pain, reducing the risk of infection, and avoiding the impact of long-term foreign body residue on joint function. It is used in various fracture repair surgeries.

The global Bioabsorbable Interference Screw market size was estimated at USD 1242.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.40% during the forecast period.
