Abstracts

A bioabsorbable vessel closure system, also known as a bioabsorbable vascular closure device (VCD), is a medical device used to achieve hemostasis (the stopping of bleeding) and closure of the puncture site in a blood vessel following certain minimally invasive medical procedures, such as percutaneous coronary interventions (PCI), angiography, and catheterization. These devices are designed to provide a temporary seal at the vascular access point, preventing bleeding and complications, and then gradually break down or be absorbed by the body over time.
