The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bioactive Compounds competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Bioactive compounds production reached approximately 220 kilotons, with an average global market price of around US\$ 80 per kg. Bioactive compounds are naturally occurring or synthetically produced chemical substances that exert a biological effect on living organisms, tissues, or cells. Unlike essential nutrients, bioactive compounds are not required for basic human survival but can influence health outcomes by modulating physiological or cellular processes. These compounds are commonly found in foods, especially fruits, vegetables, herbs, spices, and marine products, and include classes such as polyphenols, alkaloids, flavonoids, carotenoids, glucosinolates, and peptides. Bioactive compounds are widely studied for their potential roles in disease prevention, therapeutic interventions, and enhancement of overall wellness due to their antioxidant, anti-inflammatory, antimicrobial, and anticancer properties.

The global Bioactive Compounds market size was estimated at USD 17495.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
