Abstracts

Biobased pest repellents are formulations derived from natural, renewable biological sources?such as plant extracts (e.g., essential oils from citronella, neem, or peppermint), animal by-products, or microbial compounds?that are engineered to deter, repel, or eliminate pests including insects, rodents, and other nuisance organisms without relying on synthetic chemicals. These products are distinguished by their biodegradability, reduced environmental persistence, and lower toxicity profiles compared to conventional synthetic pesticides, aligning with growing consumer demand for sustainable, eco-friendly solutions in agriculture, horticulture, household care, and public health applications. The effectiveness of biobased repellents often hinges on bioactive compounds that interfere with pest sensory mechanisms or behavior, and their regulatory status varies by region, with many falling under reduced-risk or organic certification categories that facilitate market access amid tightening chemical regulations.

The global Biobased Pest Repellents market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
