Biochemistry analysers are automated laboratory instruments designed to perform a panel of tests on biological samples?primarily blood, serum, plasma, and urine?to measure concentrations of various analytes such as glucose, cholesterol, electrolytes, enzymes, hormones, and metabolites. These systems integrate technologies including photometry, ion-selective electrodes, immunoassays, and sometimes molecular methods to deliver quantitative results critical for disease diagnosis, monitoring treatment efficacy, and preventive health screening. They range from compact, benchtop devices used in point-of-care or small clinics to high-throughput modular systems in centralized laboratories, featuring varying levels of automation, from sample loading and reagent handling to data management and connectivity with laboratory information systems.

The global Biochemistry Analysers market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
