## Abstracts

Biochips are bio-microsystems. Bio-microsystems are small integrated devices used for biochemical reactions, biological monitoring, research, academic studies, drug discovery, and much more. In simple terms, biochips are small sized chips that can perform multiple (generally thousands) biochemical reactions parallelly. A collection of microarrays or micro-test sites form these biochips. Microarrays when arranged on a surface made up of either glass or silicon, can perform large numbers of tests at the same. Thus, they help in cost and time saving.

The global Biochips market size was estimated at USD 9502.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.09% during the forecast period.
