Biocide formulations are used extensively in pulp and paper mills to prevent microbial contamination. The biocidal treatment helps protect equipment against corrosion and prevents slime formation that reduces system efficiency and product quality. These biocide treatments target microorganisms that can cause spoilage in the water loop or infect raw materials such as wood chips or recycled fibers. They also help control odors caused by microbial metabolites in process waters and wastewater streams released into nearby rivers or lakes.

The global Biocides For Pulp And Paper Industry market size was estimated at USD 4520.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
