Abstracts

Biocontrol solutions correspond to all methods of controlling insects and other pests, diseases and weeds, using organisms (macro-organisms, micro-organisms), chemical mediators (pheromones or kairomones) or natural substances of animal, plant or mineral origin. The purpose of biostimulants is to stimulate natural plant or soil processes, to facilitate or regulate nutrient uptake, improve resistance to abiotic stress, or optimize plant quality characteristics. The development of these solutions makes it possible to respond to several key agricultural challenges: Reducing the use of chemical inputs, Protecting animal and human health, Improving soil quality, Enhancing crop resilience. Today, these solutions are marketed as manufactured products. It's not so much a question of agronomic methods or practices, even if these are essential as a complement to the application of these solutions, as of alternatives formulated within a new emerging sector. Their ease of application and compatibility with other agricultural products or agro-equipment are essential criteria.

The global Biocontrol Solutions market size was estimated at USD 4864.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
