Report Overview

Biodegradable adhesives refer to those that break down naturally. The failure of early biodegradable polymers to properly degrade has led the ASTM to create a definition for what constitutes ?biodegradability.? Biodegradability means that a product is ?capable of undergoing decomposition into carbon dioxide, methane, water, inorganic compounds, or biomass in which the predominant mechanism is the enzymatic action of microorganisms that can be measured by standardized tests, in a specific period of time, reflecting available disposal conditions?. Many so-called biodegradable polymers are actually bioerodable, hydro-biodegradable or photo-biodegradable.
